

Beacon Lighting Station

Specifications

Designer
Republic of II by IV

OVERVIEW

- BEACON is a lighting station that can be used as a standalone component, or in conjunction with other Hopscotch products.

CONSTRUCTION DETAILS

Shell

- The shell is made of roto-molded plastic. The core is translucent when light is shined from the inside.

Light

- The light source is an arrangement of LEDs and the light fixture along with the shell is fastened to the base.

Base

- The base is made of cast aluminum flat sides and extruded aluminum angled sides.
- The base comes standard in bright polished aluminum finish, and is also available powder coated in Arconas standard colors.
- The bottom plate is welded CRS.
- The bottom plate is fitted with 4 adjustable glides.

Assembly

- Units are shipped fully assembled.
